

To maintain the performance of the cooling units and to ensure a long service life of the units regular maintenance is required. For detailed information please refer to the operating instructions:

- The device must always be disconnected from the power supply during maintenance.
- The condenser should be cleaned every three months with a vacuum cleaner or brush from top to bottom (Attention, the lamellas are sharp!), in order to avoid the claim of the manufacturer's guarantee.
- Cooling maintenance may only be carried out by qualified personnel.
